The purpose of this presentation is to inform industry professionals about basic components, application examples, and performance/selection metrics of large-diameter ceiling fans (LDCF), many of which also classify as High Volume Low Speed fans (HVLS). At the end of this presentation you will be able to: (1) Identify a LDCF and the major components; (2) Explain how LDCF work in different applications, including benefits in hangars and manufacturing locations; (3) Identify if a LDCF is compliant with US DOE efficiency regulations; and (4) Describe the differences between test methods for LDCF.

Christian Taber is a senior engineer at Big Ass Fans, working on building codes/standards and fan test standards that impact the fan industry. Taber is an ASHRAE certified High-Performance Building Design Professional, a Certified Energy Manager, and a committee member of ASHRAE Standard 90.1. He is also a member of the review committees for AMCA 230, 214, 211, 208, and 11. He holds an M.S. in mechanical engineering and B.S. in chemical engineering from Iowa State University, and an M.S. in biosystems engineering from the University of Kentucky.
